

PRIVATE APP DISTRIBUTION + APPLE DEVICE MANAGEMENT

Your business apps. Your company devices. One workspace.

AppDeploy connects the apps your people need with the company iPhones, iPads and Macs they use - bringing distribution, device management and release oversight together.

FROM PUBLISHING AN APP TO RUNNING IT AT WORK

01 DISTRIBUTE

A branded place for company apps

Help staff find approved private and internal apps. Assign the right apps to the right groups.

02 MANAGE

Company devices, in one view

Enrol Apple devices, apply settings, install apps and keep inventory and update status in view.

03 SEE THE OUTCOME

Release checks and device status

Check builds before release, investigate deployment blockers and retain release records.

One connected workflow: discover, assign, manage and review.

WHERE THE CONVERSATION STARTS

A practical fit for teams that run on apps.

For organisations with internal apps, company Apple devices and a need for clearer operational ownership.

ILLUSTRATIVE USE CASE / BANKING & FINANCIAL SERVICES

Equip staff. Keep the rollout visible.

A branch or relationship-management team needs an internal app on company iPads. AppDeploy can combine staff app discovery, group assignment, device settings and installation status in one workspace.

Field teams & logistics

Give engineers or site teams a consistent route to job apps and company-device setup.

Retail & hospitality

Keep store or venue teams aligned on the apps assigned to company iPads.

Healthcare operations

Distribute staff workflow apps and manage company devices used by operational teams.

Agencies & service providers

Offer clients a branded app destination alongside an agreed device-management scope.

The right introduction

An IT or endpoint leader, enterprise mobility owner, internal app team or digital operations sponsor. Security and procurement join when there is a defined use case.

Start with one app and one team.
